

# What is Japan's energy situation?

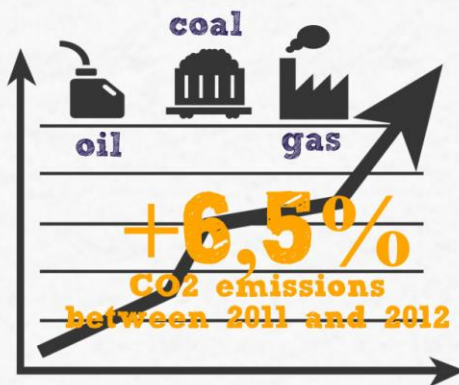

After Fukushima's accident, all 50 of Japan nuclear reactors were progressively shut down. Japan decreased from:

of its power from nuclear energy in 2011

## The environmental and economic impacts

Japan, host country of the Kyoto Protocol, abandoned its target to cut down CO2 emissions and extensively uses fossil fuel (imported) to produce its electricity.

Due to coal and gas import, electricity cost increased by 15 to 20% for industry and household.

**+20%**  
electricity cost
